

Compassionate leading-edge cardiovascular technology and expertise

Prisma Health's comprehensive Heart & Vascular service line provides advanced care to two-thirds of the state and offers more subspecialty expertise for complex conditions. We are proud to partner with you to deliver cutting-edge care to your patients, including a wide range of the most advanced options and technology.

From interventional cardiology and structural heart to electrophysiology and advanced heart failure care, we're doing even more to return your patients to you in the best health.

Interventional cardiology

Cutting-edge cardiovascular technology and expertise

If your patients need interventional cardiology, Prisma Health's comprehensive Heart & Vascular program is ready to provide leading-edge care with compassion. We offer:

- Newest stents to treat complex blockages
- Pressure wires to assess physiological blockages
- Latest diagnostic imaging: optical coherence tomography and intravascular ultrasound

Structural heart

A leader in the latest technologies and procedures

Patients with cardiac conditions, such as cardiomyopathy, congenital heart disease and heart valve disease are in exceptional hands at Prisma Health. We offer experience and the latest procedures:

- Four transcatheter aortic valve replacement (TAVR) options: Transfemoral, subclavian artery, carotid artery and transapical
- MitraClip™ to prevent valve regurgitation
- Edwards SAPIEN valve that delivers complete recovery from aortic stenosis

<15%

readmission rate

30% is the national average

Heart failure

Advanced options for heart failure patients

Our Congestive Heart Failure program includes the latest testing, procedures and monitoring to keep patients out of the hospital and living their best lives. We have the lowest readmission rates in South Carolina and the latest options:

- CardioMEMS™ — we are the leading implanter in the U.S.
- Ventricular-assist devices (VAD) for patients waiting for transplants
- Transcatheter aortic valve replacement (TAVR), ideal for patients over 65

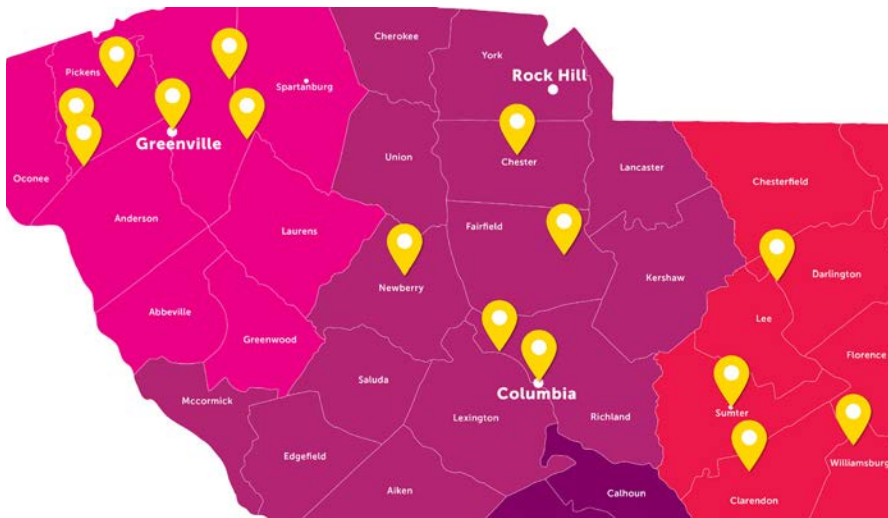

Electrophysiology

Innovative approaches to treat atrial fibrillation and arrhythmia

For patients with AFib or arrhythmia, our electrophysiologists provide advanced treatments, from medication to minimally invasive surgery. We have an entire center and medical practice dedicated exclusively to arrhythmia. Advances offered include:

- WATCHMAN™ and WATCHMAN FLX™ devices
- Artificial intelligence to determine heart failure to prevent readmission
- Cryoballoon ablation to freeze electrical currents that cause AFib
- Micra® Transcatheter Pacing System — advanced pacemaker one-tenth the size and zero wires

Offering multiple locations for patient convenience

Comprehensive referring physician follow-up program

Care coordinators collaborate with referring physicians to adjust meds and quickly answer questions
