

Blood and Marrow Transplant Program

ucsfbenioffchildrens.org/bmt

UCSF Benioff Children's Hospitals are best in Northern California for pediatric cancer.

Largest pediatric blood and marrow transplant program in Northern California

North American experts in transplantation for immunodeficiency – leaders of the 47-site Primary Immune Deficiency Treatment Consortium

Overall one-year survival rate for patients receiving first allogeneic transplant, 2018-2020

SUPERIOR OUTCOMES FOR CHILDREN WITH CANCER AND OTHER DISORDERS

The Blood and Marrow Transplant Program at UCSF Benioff Children's Hospitals is a leader in specialized treatment options for children with certain types of cancer, disorders of the blood and immune system, and a variety of other rare conditions. Our outstanding outcomes are the result of the efforts of our nationally and internationally recognized faculty, and the availability of cutting-edge clinical trials and therapies for patients with these rare disorders.

CONDITIONS TREATED

Malignant disorders

- Acute leukemias and lymphomas
- High-risk neuroblastomas
- Brain tumors
- Other rare cancers

Nonmalignant disorders

- Inborn errors of immunity, including primary immunodeficiency diseases and primary immune regulatory disorders
- Inborn errors of metabolism
- Bone marrow failure syndromes (acquired and genetic)
- Hemoglobinopathies
- Osteopetrosis

Blood and Marrow Transplant Program

WHY REFER TO UCSF?

- Personalized care plans developed for each patient, tailored to their individual condition, status and pharmacogenomic profile – thereby optimizing conditioning exposure
- Delivery of CAR T-cell and other novel immunotherapies, including the first commercially available products from Novartis (Kymriah) and Kite (Yescarta)
- Access to cutting-edge treatments such as gene therapy for various genetic disorders (including SCID, beta thalassemia and sickle cell disease), some of which are only available at UCSF Benioff Children's Hospitals
- Seamless integration with immunology experts for patients with inborn errors of immunity, as well as multidisciplinary clinics for inborn errors of metabolism and chronic graft versus host disease
- Multiple clinical trials available for access to novel therapies, including ancillary trials designed to improve supportive care and outcomes
- A unique multidisciplinary forum designed to optimize outcomes for immunocompromised critical care patients who require intensive support
- Access to the Stad Center for Pediatric Pain, Palliative & Integrative Medicine, dedicated to relieving pain and improving quality of life for hospitalized children
- Clinical social workers who provide emotional support and resource coordination for the whole family, including assistance with transportation and local lodging
- Child life specialists and creative arts therapists who develop positive health care experiences for hospitalized children and their families
